EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 56566

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

(1) Emission point identification - either specific equipment designation or emission point number (EPN) from a plot plan.
(2) Specific point source names. For fugitive sources, use an area name or fugitive source name.
(3) VOC - volatile organic compounds as defined in the Title 30 Texas Administrative Code § 101.1
CO - carbon monoxide
NO_x - total oxides of nitrogen
PM_{10} - particulate matter (PM) less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
SO_2 - sulfur dioxide
NH_3 - ammonia
H_2SO_4 - sulfuric acid
H_2S - hydrogen sulfide
(4) Emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions and permit application representations.
(5) Only emissions from this permitted facility are shown as controlled by the Spent Acid Furnace (EPN 104) authorized under Permit Number 4802.
(6) This EPN shall emit collected barge loading vapors from this permitted facility until the emissions are successfully routed to EPN 123. Emissions may not be routed to either caustic scrubber for more than a total combined 1,314 hours per calendar year. The VOC emissions from this permitted facility are controlled by the Vapor Combustor (EPN 170) authorized under Permit Number 4802. These emissions are based on the worst-case scenario when the Vapor Combustor (EPN 170) and the Furnace (EPN 104) are down.
(7) This EPN shall emit collected barge loading vapors from this permitted facility after emissions are successfully re-routed from EPN 122. Emissions may not be routed to either caustic scrubber for more than 1,314 hours per calendar year. The vapor combustor does not control VOC emissions from this permitted facility.
(8) Emissions are authorized under the Standard Permit Number 81025 for the addition of a selective catalytic reduction (SCR) to control NO_x. They are incorporated by reference only.
(9) The maintenance, start-up, and shutdown (MSS) emissions are from the MSS activities on the boiler when the SCR does not control NO_x.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:
8,760 Hrs/year.

** Compliance with annual emission limits is based on a rolling 12-month period.
