Emission Sources - Maximum Allowable Emission Rates

Permit Numbers 6048 and PSDTX74M2

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources, use area name or fugitive source name.
(3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
NO_x - total oxides of nitrogen
SO_2 - sulfur dioxide
PM - total particulate matter, suspended in the atmosphere, including PM_{10} and $PM_{2.5}$, as represented
PM_{10} - total particulate matter equal to or less than 10 microns in diameter, including $PM_{2.5}$, as represented
$PM_{2.5}$ - particulate matter equal to or less than 2.5 microns in diameter

(7) Kiln 1 and Kiln 2 combined emission limits for NO_x, SO_2, and CO.
(8) Compliance is based on a 30-day rolling average. The 30-day rolling average is to be computed for hours of clinker production only, on a daily basis as the average of the 30th day average emissions and the preceding 29 daily average emissions. **(10/13)**
(9) 3-hour average as determined by the continuous emission measurement system.
(10) 24-hour average as determined by the continuous emission measurement system.
