EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 8996/PSD-TX-454M2

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources use area name or fugitive source name.
(3) PM - particulate matter, suspended in the atmosphere, including PM_{10}
PM_{10} - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
NO_x - total oxides of nitrogen
CO - carbon monoxide
THC - total hydrocarbons
SO_2 - sulfur dioxide
TRS - total reduced sulfur
H_2SO_4 - sulfuric acid mist
(4) Fugitive emissions are an estimate only.
(5) The PM filterable rates are based on front-half of sampling train only.
(6) The PM condensibles are based on back-half of sampling train only.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/year 8,760

Maximum allowable clinker production rate of 7,000 tons/day.
