EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 4673B

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources use area name or fugitive source name.
(3) VOC - volatile organic compound
PM_{10} - particulate matter (PM) equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
NO_x - total oxides of nitrogen
SO_2 - sulfur dioxide
CO - carbon monoxide
VCM - vinyl chloride monomer
NH_3 - anhydrous ammonia
HAP - unspeciated hazardous air pollutants
(4) Fugitive emissions are an estimate based on component count, emission factors, and applicable reduction credits for a leak detection and repair program.
(5) Total for residual VCM emissions is 2.16 pounds per hour and **2.96** tons per year.
(6) Total VOCs not including VCM and other hazardous air pollutants (HAPs).
(7) VOC emissions due to combustion of natural gas.
(8) Acetaldehyde and other unspeciated HAPs due to decomposition reactions and the combustion of natural gas.
(9) Acetaldehyde and other unspeciated HAPs, not including VCM, due to decomposition reactions.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/year 8,760

** Compliance with annual emission limits is based on a rolling 12-month period.
