EMISSION SOURCES - MAXIMUM
ALLOWABLE EMISSION RATES

Permit Number 705

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit, or subsequent requests for modification, and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources use area name or fugitive source name.
(3) PM - particulate matter, suspended in the atmosphere, including PM_{10}
PM_{10} - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
SO_2 - sulfur dioxide
NO_x - total oxides of nitrogen
CO - carbon monoxide
VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
(4) VOCs in sources associated with creosote treatment (excludes boilers) include four Hazardous Air Pollutants (HAPs): naphthalene, dibenzofuran, biphenyl, and quinoline. Naphthalene represents the HAP of the highest concentration in VOCs, approximately 58 percent of the total VOC amount. The remaining three HAPs are present at a combined concentration of less than 4 percent of the total VOC amount.
(5) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.

* Emission rates are based on and the facilities are limited by the following maximum operating

schedule and maximum production limits:

Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/year 8,736

7,020,000 cubic feet of raw timber treated per year.
