Emission Sources - Maximum Allowable Emission Rates

Permit Number 157170

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Air Contaminants Data

Emission Point No. (1)	Source Name (2)	Air Contaminant Name (3)	Emission Rates	
			lbs/hour	TPY (4)

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources, use area name or fugitive source name.
(3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
NO_x - total oxides of nitrogen
SO_2 - sulfur dioxide
PM - total particulate matter, suspended in the atmosphere, including PM_{10} and $PM_{2.5}$, as represented
PM_{10} - total particulate matter equal to or less than 10 microns in diameter, including $PM_{2.5}$, as represented
$PM_{2.5}$ - particulate matter equal to or less than 2.5 microns in diameter
CO - carbon monoxide
H_2S - hydrogen sulfide
(4) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.
(5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.
(6) Maintenance, start-up, and shut-down activities.
(7) The MSS emissions represented as [EPN]: MSS-FL-1 represent a contribution of emissions released by the enclosed ground flare. The MSS emissions authorized by this permit represent the emissions generated from MSS activities at the Galveston Terminal operations and the emission contribution of the total source point emissions generated. The remaining MSS flare-controlled emissions are generated from the crude processing unit (CPU) operations authorized under NSR Permit no. 166930. [EPN]: MSS-FL-1 represents the Galveston Terminal MSS emissions controlled by the site's enclosed ground MSS flare. The Galveston Crude Processing Unit (CPU) authorized by NSR Permit no. 166930 routes the waste stream generated by CPU MSS also contributed to the emissions controlled by this flare.
