

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 4943B

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (4) Total annual emissions for all four cracking furnaces are limited to the combined allowables listed under "Total annual allowables for all four Cracking Furnaces."
- (5) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
- (6) The total long-term PM allowable for both incinerators is 15 tpy. In order to allow for increased operational flexibility, either incinerator may emit more than 7.5 tpy as long both incinerators together emit no more than 15 tpy.
- (7) Stack concentrations of CO may exceed 100 ppmv corrected to 7 percent oxygen during start-up, shutdown, and transition events.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

_____ Hrs/day _____ Days/week _____ Weeks/year or 8,760 Hrs/year

** Compliance with annual emission limits is based on a rolling 12-month period.
