

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

21945/PSD-TX-813

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) PM10 - particulate matter less than 10 microns
VOC - volatile organic compounds as defined in General Rule 101.1
NOx - total oxides of nitrogen
SO2 - sulfur dioxide
CO - carbon monoxide
HCl - hydrogen chloride
- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
- (5) Includes the maximum SO2 generated from combustion of Merox off-gas containing diethyldisulfide (DEDS) from Merox unit. This may alternatively be combusted in the DIB 900 (Permit No. 20509/PSD-TX-790). See Special Provision No. 6(B)(2).
- (6) Includes the maximum HCl generated from the combustion of Isomerization off-gas containing HCl. See Special Provision No. 6(B)(1).
