## EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 9621Q

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
  - (2) Specific point source name. For fugitive sources use area name or fugitive source name.
  - (3) PM - particulate matter, suspended in the atmosphere, including PM<sub>10</sub>  
PM<sub>10</sub> - particulate matter less than or equal to 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.  
VOC (a) - volatile organic compounds for standard mix as defined in 30 Texas Administrative Code §101.1  
VOC (b) - additional VOC due to the use of crumb rubber  
NO<sub>x</sub> - total oxides of nitrogen  
SO<sub>2</sub> - sulfur dioxide  
CO - carbon monoxide
  - (4) Fugitive emissions are an estimate.
  - (5) May be VOC (a) or VOC (b) depending on the type mix being produced.
- \* Emission rates are based on, and the facilities are limited to, maximum asphalt concrete production rates of 400 tons per hour and 300,000 tons per year of asphalt concrete mixed. The manufacture of crumb rubber modified mixes is limited to 400 tons per hour and 100,000 tons per year.
