

Emission Sources - Maximum Allowable Emission Rates

Permit Numbers 16909 and PSDTX780

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3) NO_x - total oxides of nitrogen
 CO - carbon monoxide
 VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
 SO₂ - sulfur dioxide
 SO₃ - sulfur trioxide
 PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.

Emission Sources - Maximum Allowable Emission Rates

PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter

- (4) Turbine (CG1 and CG2) hourly emissions are based on 20°F ambient temperature and annual emissions are based on 66.5°F ambient temperature.
- (5) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.
