

### Emission Sources - Maximum Allowable Emission Rates

Permit Number 6825A, PSDTX49M1, N65

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

## Air Contaminants Data

[illegible]

## Emission Sources - Maximum Allowable Emission Rates

		PM <sub>10</sub> (20)	2.48	4.26
		PM <sub>2.5</sub> (20)	0.37	0.63

- (1) Emission point identification - either specific equipment designation or emission point number (EPN) from a plot plan per Attachment 1.
- (2) Specific point source names. For fugitive sources use area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
  - NO<sub>x</sub> - total oxides of nitrogen
  - SO<sub>2</sub> - sulfur dioxide
  - CH<sub>4</sub> - methane
  - CO - carbon monoxide
  - CO<sub>2</sub> - carbon dioxide
  - CO<sub>2</sub>e - carbon dioxide equivalents based on the following Global Warming Potentials (1/2015): CO<sub>2</sub> (1), N<sub>2</sub>O (298), CH<sub>4</sub>(25), SF<sub>6</sub> (22,800), HFC (various), PFC (various).
  - N<sub>2</sub>O - nitrous oxide
  - PM - particulate matter, suspended in the atmosphere, including PM<sub>10</sub> and PM<sub>2.5</sub>.
  - PM<sub>10</sub> - particulate matter equal to or less than 10 microns in diameter.
  - PM<sub>2.5</sub> - particulate matter equal to or less than 2.5 microns in diameter
  - H<sub>2</sub>S - hydrogen sulfide
  - HCl - hydrogen chloride
  - HF - hydrogen fluoride
  - MTBE - methyl-tertiary-butyl ether
  - N<sub>2</sub>O - nitrous oxide
  - NH<sub>3</sub> - ammonia
  - HCN - hydrogen cyanide
  - H<sub>2</sub>SO<sub>4</sub> - sulfuric acid
- (4) Emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions and permit application representations.
- (5) Rates effective after facilities associated with COEX II Project are operating.
- (6) Caps effective after sources associated with COEX II Project and EPNs E-01-19BH, E 02 19BH, and E-03-19BH are operating. Boilerhouse 15 low NO<sub>x</sub> burner project and shutdown of Boilerhouse 16 combustion units must be complete.
- (7) Allowable emission rates prior to the Boilerhouse 15 low NO<sub>x</sub> burner project (Pre-mod).
- (8) Post-mod Phase I: Allowable emission rates after the Boilerhouse 15 low NO<sub>x</sub> burner project authorized by Standard Permit 91911. The turbine GTG-1 shall be shutdown as part of this project.
- (9) These facilities were subject to nonattainment review for VOC for Permit N65. The MSS emissions associated with the COEX II facilities authorized in Permit Number 80812 must also be added to the routine emissions from the COEX II facilities to determine compliance with this annual emission cap.
- (10) The Boilerhouse 16 units must be shutdown and the Boilerhouse 15 low NO<sub>x</sub> burner project completed prior to the end of the 180 day shakedown period for Boilerhouse 19 Boilers 1, 2, and 3 {authorized by Permit 103765}.
- (11) These emission caps have been carried forward from the flexible permit. With the exception of VOC emissions from COEXII facilities, these caps apply to the sum total of all emissions of that pollutant from the facilities listed on Attachment I. In addition, the maintenance, startup, and shutdown (MSS) emissions authorized in Permit Number 80812 must also be added to the routine emissions from the

Emission Sources - Maximum Allowable Emission Rates

facilities in Attachment I to determine compliance with these emission caps unless the cap is designated with a footnote (12). The emission caps that are not designated with a footnote (12) are those that are more limiting than the sum of the individual emission rate limits for those facilities. VOC MSS emissions from COEX II facilities do not need to be included when showing compliance with the annual VOC cap.

- (12) These emission caps are the sum of the individual and subcap emission rates for the pollutant and are shown for information only.
- (13) Post-mod Phase II: These allowable emission rates shall apply in lieu of those designated with footnote (8) (aka Post-mod Phase I) if the permit holder samples these facilities for PM<sub>2.5</sub> per Special Condition 40 after completing the Boilerhouse 15 low NO<sub>x</sub> burner project and the results show PM<sub>2.5</sub> emissions are less than 73 percent of the maximum hourly total PM emission rate limit.
- (14) Caps effective after start of operation of entire flare gas recovery system.
- (15) Installation of low NO<sub>x</sub> burners in Boilerhouse 15 boilers authorized by Standard Permit 91911.
- (16) Installation of low NO<sub>x</sub> burners in Boilerhouse 16 boilers authorized by Standard Permit 94365.
- (17) Tank authorized by PBR Registration 84905.
- (18) This emission cap applies to the sum of VOC emissions from all facilities listed in Attachment 1 and MSS activities authorized in this permit and from all facilities and MSS activities authorized in Permit 80812.
- (19) Emissions are a subcap of COEXII VOC Cap.
- (20) Emissions become effective upon construction and startup of the Coker Project, PI-1 dated February 28, 2017

Emission Sources - Maximum Allowable Emission Rates

- (21) Limits apply January 1, 2019.
- (22) Annual emissions are included as part of annual emissions authorized for normal facility operation.
- (23) Hourly emissions from Flare EPNs E-23-Flare and E-26-Flare are a subcap of the emissions authorized for the flare in MSS permit 80812.
- (24) Includes emissions from marine vapor combustors E-MC-24 and E-MC-25

\* Emission rates are based on operating 8,760 hrs/year.

\*\* Compliance with annual emission limits is based on a rolling 12-month period

Date: September 14, 2018

# Emission Sources - Maximum Allowable Emission Rates

Permit Number GHGPSDTX167

This table lists the maximum allowable emission rates of greenhouse gas (GHG) emissions, as defined in Title 30 Texas Administrative Code § 101.1, for all sources of GHG air contaminants on the applicant's property that are authorized by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities authorized by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3) CO<sub>2</sub> - carbon dioxide  
N<sub>2</sub>O - nitrous oxide  
CH<sub>4</sub> - methane  
CO<sub>2</sub>e - carbon dioxide equivalents based on the following Global Warming Potentials (GWP) found in Table A-1 of Subpart A 40 CFR Part 98 (78 FR 71904) for each pollutant: CO<sub>2</sub> (1), N<sub>2</sub>O (298), CH<sub>4</sub>(25)
- (4) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period. These rates include emissions from maintenance, startup, and shutdown.
- (5) Emission rate is given for informational purposes only and does not constitute enforceable limit.

Date: November 16, 2018
