

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 26622

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) PM - total suspended particulate matter including PM₁₀
 PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
- (a) Emission rates are based on and the facilities are limited to an hourly throughput of 336 tons and an annual throughput of 34,500 tons of grain.
- (b) Emission rates are based on and the facilities are limited to an hourly throughput of 252 tons of grain.
- (c) Emission rates are based on and the facilities are limited to an hourly throughput of 126 tons of grain.
- (d) Emission rates are based on and the facilities are limited to an annual throughput of 34,500 tons of grain.
