

# Emission Sources - Maximum Allowable Emission Rates

Permit Number 6825A, PSDTX49M2, and N65

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (4) Emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions and permit application representations.
- (5) These facilities were subject to nonattainment review for VOC for Permit N65. The Non-Tank maintenance, startup, and shutdown (MSS) VOC emissions associated with the COEX II facilities must also be added to the routine VOC emissions from the COEX II facilities to determine compliance with this annual emission cap.
- (7) Post-mod Phase II: After completing Boiler 15 low-NOX burner project authorized by Standard Permit 91911. These allowable emission rates shall apply in lieu of those designated as Post-mod Phase I, if the permit holder samples these facilities for PM<sub>2.5</sub> per Special Condition 51 after completing the Boilerhouse 15 low NOx burner project and the results show PM<sub>2.5</sub> emissions are less than 73 percent of the maximum hourly total PM emission rate limit.
- (8) The VOC emissions caps are more limiting than the sum of the individual emission rate limits for those facilities.
- (9) Installation of low NOx burners in Boilerhouse 15 boilers authorized by Standard Permit 91911.
- (10) With the exception of VOC emissions from COEXII facilities, this annual emissions cap applies to the sum total of all normal emissions from the facilities listed on Attachment I and the Non-tank MSS VOC emissions from the facilities listed in Attachment 6. VOC MSS emissions from COEX II facilities and the Coker 844 Project do not need to be included when showing compliance with the annual VOC cap.
- (11) Emissions are a subcap of COEXII VOC Cap.
- (12) Emissions shall supersede all existing authorized limits of that pollutant upon completion of the facility's modification as represented in the Coker Project, PI-1 dated February 27, 2018. The modification shall be completed preceding the initial startup of the Coker Unit's DCU 844.
- (13) Annual emissions are included as part of annual emissions authorized for normal facility operation.
- (14) Hourly emissions from Flare EPNs E-23-Flare and E-26-Flare are a subcap of the emissions authorized for the flare in the "MSS Non-Tank Sub-Cap".
- (15) Includes emissions from marine vapor combustors E-MC-24 and E-MC-25.
- (16) These plant-wide MSS emissions subcaps do not include any Coker 844 Project MSS emissions except for hourly emissions from Flare EPNs E-23-Flare and E-26-Flare.

# Emission Sources - Maximum Allowable Emission Rates

Permit Number GHGPSDTX167

This table lists the maximum allowable emission rates of greenhouse gas (GHG) emissions, as defined in Title 30 Texas Administrative Code § 101.1, for all sources of GHG air contaminants on the applicant's property that are authorized by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities authorized by this permit.
