

EMISSIONS SOURCES- MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 24421

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) PM - particulate matter suspended in the atmosphere, including PM₁₀
 - PM₁₀ - particulate matter less than 10 microns in diameter
 - NO_x - total oxides of nitrogen
 - SO₂ - sulfur dioxide
 - CO - carbon monoxide
 - VOC - volatile organic compounds as defined in General Rule 101.1
 - Pb - lead
 - HCl - hydrogen chloride
- (4) Fugitive emissions are an estimate only.
- (5) Cedar oil vapor
- (6) Emissions from the stack may exceed the quantity listed; however, the total emissions from both Boiler Stack Nos. 1 and 2 shall not exceed the sum of the quantities listed for Stack Nos. 1 and 2.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule and throughput:

Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/year 8,736

The hog and hammermill are limited to grinding of 30 tons per day of raw material and 12 hours per day of daytime operation.

The Cedar oil distillation process shall not exceed an hourly throughput of 1,000 pounds of ground cedar.

The combined firing rate for the main boiler furnace and the waste heat boiler furnace shall be limited to the burning of 2,500 pounds per hour and 30 tons per day of ground wood fines, except for the use of diesel fuel, cedar wood rosin, and waste oil as prescribed in Special Condition No. 3. Wood used for fuel shall consist either of ground cedar or corriander that are products of the distillation process or unpainted and untreated wood.
