

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 6995

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3)
 - PM - particulate matter
 - VOC - volatile organic compounds as defined in General Rule 101.1
 - NO_x - total oxides of nitrogen
 - SO₂ - sulfur dioxide
 - CO - carbon monoxide
 - NaOH - sodium hydroxide
 - POC - products of combustion including PM, CO, SO₂, VOC and NO_x (unless listed separately).
- (4) Scrubber emission rates reflect the total rate by air contaminant category for all scrubbers operating at maximum capacity.
- (5) Hourly emission rates for emergency generators and fire pumps reflect the combined total maximum hourly rate for all units. Annual rates are the combined total for all units assuming a maximum of 520 hours operation per year.
