

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 17392

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.

(2) Specific point source name. For fugitive sources use area name or fugitive source name.

(3) VOC - volatile organic compounds as defined in General Rule 101.1

NO_x - total oxides of nitrogen

SO₂ - sulfur dioxide

CO - carbon monoxide

HCN - hydrogen cyanide

NH₃ - anhydrous ammonia

(4) Fugitive emissions are an estimate only and should not be

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

For the emission sources referencing compounds (5) through (8), the represented allowable is for t-octylamine (TOA), the compound which generates the highest emission rate.

* Emission rates for all sources except SW-2 are based upon the following operating schedule:

Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/year 8,760

Emission rates from SW-2 are based on a specified batch volume and number of batches per year for each of TOA and t-octadecylamine. See Special Provision No. 4.
