

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 9288

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.

(2) Specific point source name. For fugitive sources use area name or fugitive source name.

(3) VOC - volatile organic compounds as defined in General Rule 101.1

NO_x - total oxides of nitrogen
SO₂ - sulfur dioxide
PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.

CO - carbon monoxide
H₂S - hydrogen sulfide
NH₃ - ammonia

- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
- (5) Emission Point No. (EPN) 8 is the spent air stack at the SulFerox[™] Unit. This vent is used only for emergency, start-up, shutdown, upset, and maintenance conditions. During routine operations, the spent air is routed to the Heaters (EPNs H1-A and H1-B) for control.
- (6) These emergency flares are used only for emergency, start-up, shutdown, upset, and maintenance conditions. The emissions on this table represent the emissions from the pilot light.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (7) The EPNs H1-A and H1-B represent the stacks of a pair of heaters with the same nominal rating and stack characteristics, which are separated by approximately 15 meters of distance in a rural setting. Spent air from the SulFerox[™] Unit routinely vents to the air intake of either Heater (EPNs H1-A or H1-B) or some combination of the two heaters. The allowable emission rates represent the combined total emissions from both Heaters (EPNs H1-A and H1-B). Compliance with these maximum allowable emission rates may be determined as specified in the special conditions of this permit.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

_____Hrs/day _____Days/week _____Weeks/year or 8,760
