

## EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 33274

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in General Rule 101.1  
 PM - particulate matter, suspended in the atmosphere, including PM<sub>10</sub>.  
 PM<sub>10</sub> - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
- (4) Emission rates are based on a continuous operating schedule of 8,760 hours per year.
- (5) VOC emissions from coating operations at this site are limited to 13.6 tons per year.
- (6) TSP and PM<sub>10</sub> emissions from blasting operations at this site are limited to 12 and 1.2 tons per year, respectively.
