

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number: 48243

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from a plot plan.

(2) Specific point source names. For fugitive sources, use an area name or fugitive source name.

(3) VOC - volatile organic compounds as defined in 30 Texas Administrative Code Section 101.1

(4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.

(5) Emissions from individual hazardous air pollutants (HAPs) under this permit shall not exceed 9.79 tpy and total HAPs shall not exceed 14.13 tpy.

(6) Emissions from storage tanks are calculated using: (a) AP-42 "Compilation of Air Pollution Emission factors, Fifth Edition, Chapter 7 - Liquid Storage Tanks" including Supplement D pages dated September 1997 and (b) the draft TNRCC publication titled "Technical Guidance Package for Chemical Sources - Storage Tanks" dated February, 2001.

(7) Emissions from loading operations are calculated using: (a) AP-42 "Compilation of Air Pollution Emission factors, Fifth Edition, Chapter 5.2 - Transportation and Marketing of Petroleum Liquids" dated January 1995 and (b) the draft TNRCC publication titled "Technical Guidance Package for Chemical Sources - Loading Operations" dated October, 2000.

* Emission rates are based on operating 8,760 Hrs/year.

** Compliance with annual emission limits is based on a rolling 12-month period.
