

# Emission Sources - Maximum Allowable Emission Rates

Permit Numbers 76474 and PSDTX1056

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Emission Point No. (1)	Source Name (2)	Air Contaminant Name (3)	Emission Rates (14)	
			lbs/hour	TPY (4)

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.

(2) Specific point source name. For fugitive sources, use area name or fugitive source name.

(3) VOC -volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

NO<sub>x</sub>-total oxides of nitrogen

SO<sub>2</sub>-sulfur dioxide

PM -particulate matter, suspended in the atmosphere, including PM<sub>10</sub> and PM<sub>2.5</sub>

PM<sub>10</sub> -particulate matter equal to or less than 10 microns in diameter, including PM<sub>2.5</sub>

PM<sub>2.5</sub> -direct particulate matter equal to or less than 2.5 microns in diameter

Emission Sources - Maximum Allowable Emission Rates

CO	-carbon monoxide
H <sub>2</sub> SO <sub>4</sub>	-sulfuric acid mist
NH <sub>3</sub>	-ammonia
HF	-hydrogen fluoride
HCl	-hydrogen chloride
Pb	-lead
Hg	-mercury

- (4) Except as otherwise specified in special conditions, annual emission rates are based on continuous operation (24 hours/day, 7 days/week, 52 weeks/year, or 8,760 hours/year). For combustion sources and storage tanks, compliance with annual emission limits is based on a rolling 12-month period. For material handling sources, compliance with annual emission limits is based on applicable special conditions and permit application representations.
- (5) Compliance with the hourly emission limit is based on a three-hour block average of the CEMS data.
- (6) Hourly limit applies when auxiliary boiler is operating at or above 25 percent load.
- (7) Hourly limit applies when auxiliary boiler is operating below 25 percent load and during startup and shutdown.
- (8) Fugitive emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions and permit application representations.
- (9) Includes inherently low emitting (ILE) and non-ILE fugitive emissions from sources and activities listed on Attachments B and C. Emission rates are an estimate and are enforceable through compliance with the applicable special conditions and permit application representations.
- (10) Compliance with the PM/PM<sub>10</sub> (total) emission limits will be demonstrated if CEMS data shows that neither SO<sub>2</sub> emissions nor filterable PM emissions exceed their limits.
- (11) Compliance with the VOC emission limits will be demonstrated if CEMS data shows that CO emissions do not exceed their limits.
- (12) Compliance with the H<sub>2</sub>SO<sub>4</sub>, HF, and HCl emission limits will be demonstrated if CEMS data shows that SO<sub>2</sub> emissions do not exceed their limits,
- (13) Compliance with the lead emission limits will be demonstrated if CEMS data shows that filterable PM emissions do not exceed their limits.
- (14) The pounds per hour and tons per year emission rate limits for these units apply to MSS operation, as well as normal operation of the unit, except as otherwise stated in these footnotes.
