

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 89562L001

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

AIR CONTAMINANTS DATA

- (1) Emission point identification - either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources, use an area name or fugitive source name.
- (3) PM - particulate matter, suspended in the atmosphere, including PM₁₀ and PM_{2.5}
 PM₁₀ - particulate matter equal to or less than 10 microns in diameter
 PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter
- (4) Fugitive emissions are an estimate only.
- (5) Emission sources vented to the central baghouse include the cement weigh hopper and the truck drop.
- (6) Emissions based on 0.7 acre.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

20 Hrs/day 7 Days/week 52 Weeks/year or 5,600 Hrs/year

** Compliance with annual emission limits is based on a rolling 12-month period.

Maximum Hourly Production: 175 Cubic yards

Maximum Annual Production: 250,000 cubic yards/ year
