

Emission Sources - Maximum Allowable Emission Rates

Permit Number 105634

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.

(2) Specific point source name. For fugitive sources, use area name or fugitive source name.

Emission Sources - Maximum Allowable Emission Rates

- (3) PM - total particulate matter, suspended in the atmosphere, including PM₁₀ and PM_{2.5}, as represented
 - PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}, as represented
 - PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter
- (4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.
- (5) Planned startup and shutdown emissions are included. Maintenance activities are not authorized by this permit.
- (6) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.
- (7) The loadout silo (EPN E-SILODCV and E-SILOF) shall be controlled by a full enclosure or a dust collector.
- (8) The feeder stockpile area (E-FSAF) was represented as a 1 acre active area. The stockpile storage area (E-LSAF) was represented as a 21 acre area, with a maximum active area of 10.5 acres per day. The emissions quantified for the active stockpile areas include emissions from all typical operational activities of an open coal stockpile; for example, loading, unloading, shaping, and upkeep.
