

Emission Sources - Maximum Allowable Emission Rates

Permit Number 3384

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3) PM - total particulate matter, suspended in the atmosphere, including PM₁₀ and PM_{2.5}, as represented
PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}, as represented
- (4) Fugitive emissions are an estimate only.
- (5) Planned startup and shutdown emissions are included. Maintenance activities are not authorized by this permit.

* Emission rates are based on and the facilities are limited by the following maximum operating parameters:
24 Hrs/day 7 Days/week 52 Weeks/year or 8,760 hrs/year

Maximum Allowable Crusher (ANX-CR1) throughput: 180 tons/hour and 675,000 tons/year

Maximum Allowable Screen (ANX-SC1) throughput: 225 tons/hour and 750,000 tons/year

Maximum Allowable Side Feeder Hopper (ANX-DP1) throughput: 135,000 tons/year

** Compliance with annual emission limits is based on a rolling 12-month period.
