

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 22760

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in General Rule 101.1
NO_x - total oxides of nitrogen
CO - carbon monoxide
SO₂ - sulfur dioxide
HCl - Hydrochloric Acid
PM₁₀ - particulate matter less than 10 microns
- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
- (5) The flare is also in Permit No. 4437. The represented emission rates are from the gas phase polypropylene plant.
- (6) Only one pellet silo receives product at a given time; therefore, total permit PM₁₀ emission rates reflect the contribution from only one of these silos.
- (7) Only one blender silo receives product at a given time; therefore, total permit PM₁₀ emission rates reflect the contribution from only one of these silos.
- (8) Loading at EPNs 39D and 39E does not occur at the same time; therefore, total permit PM₁₀ and VOC emission rates reflect the contribution from 39D.
