

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 16810A

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) PM - particulate matter, including PM₁₀
PM₁₀ - particulate matter <10 microns
VOC - volatile organic compounds as defined in General Rule 101.1
- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

Hrs/day___Days/week___Weeks/year___or Hrs/year 8,760

NOTE:

Although the emissions rates for the three different products listed above are based on plant operation of 8,760 hours per year, the total annual cumulative emissions for the multi-purpose facility shall not exceed 25 tons per year (each) for PM and VOC.
