

Emission Sources - Maximum Allowable Emission Rates

Permit Number 4943B

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Emission Sources - Maximum Allowable Emission Rates

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3)

VOC	- volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
EDC	- ethylene dichloride
NO _x	- total oxides of nitrogen
PM	- particulate matter, suspended in the atmosphere, including PM ₁₀
PM _{2.5}	- particulate matter equal to or less than 2.5 microns in diameter
PM ₁₀	- particulate matter equal to or less than 10 microns in diameter
CO	- carbon monoxide
HCl	- hydrogen chloride
Cl ₂	- chlorine
VCM	- vinyl chloride monomer
SO ₂	- sulfur dioxide
NaOH	- sodium hydroxide
- (4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.
- (5) Emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions and permit application representations.
- (6) Total annual emissions for all four cracking furnaces are limited to the combined allowables listed under "Total annual allowables for all four cracking furnaces."
- (7) Total annual emissions for the decoking vessels are limited to the combined allowables listed under "Total annual allowables for the decoking emissions."
- (8) Stack concentrations of CO may exceed 100 ppmv corrected to 7 percent oxygen during start-up, shutdown, and transition events.
- (9) The total long-term PM₁₀ allowable for both incinerators is 13.84 tpy. In order to allow increased operational flexibility, either incinerator may emit more than 6.92 tpy as long as both incinerators together emit no more than 13.84 tpy.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

_____ Hrs/day _____ Days/week _____ Weeks/year or 8,760 Hrs/year

Date: July 9, 2014
