

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 19123

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources use area name or fugitive source name.
- (3)
 - PM - particulate matter, suspended in the atmosphere, including PM₁₀.
 - PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
 - CO - carbon monoxide
 - SO₂ - sulfur dioxide
 - NO_x - total oxides of nitrogen
 - VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
- (4) Emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions and permit application representations.
- (5) The Process Flare - Air Assist (EPN EYPRCSFL) is the primary flare for the Olefin Unit, but the Steam Assist Flare (EPN EY005RFL) and Styrene Flare (EPN ST101RFL) may each serve as backup.

* Emission rates are based on and the facilities are based on a continuous operating schedule.

** Compliance with annual emission limits is based on a rolling 12-month period.
