

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Nos. 41606 and PSD-TX-944

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in 30 Texas Administrative Code Section 101.1
 NO_x - total oxides of nitrogen
 CO - carbon monoxide
 SO₂ - sulfur dioxide
 PM - particulate matter, suspended in the atmosphere, including PM₁₀.
 PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
 H₂SO₄ - sulfuric acid
- (4) Emissions are based on non-emergency operation of 500 operating hours per year.
- (5) Fugitive emissions are an estimate based on component count and applicable fugitive emission factors.
- (6) Cooling tower PM and PM₁₀ emissions are an estimate only based on manufacturers' data. Cooling tower assembly has nine vent fan exhausts; emissions are sum-total of all nine exhausts.
- (7) All sources at the Duke Energy Bell Plant, represented in the June 1999 permit application, are regulated under prevention of significant deterioration and State regulations for NO_x, CO, SO₂, PM, and PM₁₀.

* Emission rates are based on an operating schedule of 8,760 hours/year.

** Compliance with the annual emission limits shall be based on a rolling 12-month year rather than the calendar year.
