

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 23979

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) TSP - total suspended particulate matter including PM10
 PM10 - particulate matter less than 10 microns in diameter
 SO2 - sulfur dioxide
 NOx - oxides of nitrogen
 CO - carbon monoxide
 VOC - volatile organic compounds
- (a) Emission rates are based on and the facilities are limited to an hourly throughput of 100 tons and an annual throughput of 128,663 tons of feed and feed ingredients.
- (b) Emission rates are based on and the facilities are limited to an hourly throughput of 94 tons and an annual throughput of 182,500 tons of feed and feed ingredients.
- (c) Emission rates from vehicular traffic are based on and the facilities are limited to 82,160

- vehicular miles travelled per year.
- (d) Emission rates for the boiler are based on an operating schedule of 13.5 hours per day for 365 days per year.
