

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 1037

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in 30 Texas Administrative Code Section 101.1
PM - particulate matter, suspended in the atmosphere, including PM₁₀.
PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
NO_x - total oxides of nitrogen
CO - carbon monoxide
SO₂ - sulfur dioxide
- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.

* Compliance with annual emission limits is based on a rolling 12-month period.

** Emission rates are based on and the facilities are limited by the following maximum operating schedule:

24 Hrs/day 7 Days/week 52 Weeks/year or 8,760 Hrs/year

Dryer Throughput: 25,000 square feet per hour of veneer produced on "3/8" basis and 130,000,000 square feet per year.

Wood-Fired Boiler: 120,000 pounds per hour of steam produced and 20.5 tons per hour of wood fuel burned or 149,744 tons per year of wood fuel burned.

Studmill Kilns: 3.25 tons per hour of fuel to burner or 20,625 tons per year of fuel and 268,000 boardfeet per charge of lumber produced or 110,000,000 board feet per year of lumber.

Sawmill Kilns: Nominal throughput of 200,000,000 board feet per year of lumber produced.
