

## EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. T-17769

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

### AIR CONTAMINANTS DATA

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) TSP - total suspended particulate  
PM10 - particulate matter less than 10 microns in diameter
- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
- (5) Emission point F1 includes former emission points R5 and 7.  
Emission point F2 includes former emission points 1A, 2, 3A, 4A, 5, 6, 8.

\* Emission rates are based on and the facilities are limited to maximum crushed concrete throughput rates of 150 tons per hour and 200,000 tons per year and the following maximum operating schedule:

Hrs/day 12 Days/week 6 Weeks/year 52 or Hrs/year 3,744
