

Emission Sources - Maximum Allowable Emission Rates

Permit Number 1980, PSDTX1472M1 and GHGPSDTX191

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources, use area name or fugitive source name.
(3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

CO₂ - carbon dioxide
N₂O - nitrous oxide

Emission Sources - Maximum Allowable Emission Rates

CO_{2e} - carbon dioxide equivalents based on the following Global Warming Potentials (GWP) found in Table A-1 of Subpart A 40 CFR Part 98 (78 FR 71904) for each pollutant: CO₂ (1), N₂O (298), CH₄(25).

- (4) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.
- (5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.
- (6) This is the maximum allowable rolling 12-month combined emission rate from routine storage and roof landings for all floating roof storage tanks covered by this permit. Each storage tank is also subject to its individually listed hourly VOC emission rate for routine storage. In addition, the total annual VOC emission rate from all of the floating roof storage tanks shall not exceed the listed EPN TANKCAP emission limit.
- (7) These are maximum VOC emissions for floating roof storage tank degassing to the atmosphere. Hourly emissions are based on no more than one floating roof storage tank being degassed to the atmosphere at any one time. Annual emissions are based on up to 20 floating roof storage tanks being degassed to the atmosphere in any 12-month period. Annual emissions are for a rolling 12-month basis.
- (8) These are maximum VOC emissions from the venting of planned landing, degassing and refloating emissions to the portable vapor combustor. Hourly emissions are based on emissions from no more than one floating roof storage tanks being vented to the portable vapor combustor at any one time. Annual emissions are for a rolling 12-month basis.
- (9) Emission rate is given for informational purposes only and does not constitute enforceable limits.
