

# EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. S-18963

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.

(2) Specific point source name. For fugitive sources use area name or fugitive source name.

(3) QO - quench oil

CO - carbon monoxide

Cr - chromium (hexavalent)

VOC - volatile organic compounds

HCl - hydrochloric acid

Ni - nickel

(4) Fugitive emissions are an estimate only.

\* Emission rates for quench oil from the hardening and tempering furnaces are based on usage and loss rates represented in the permit file and the facility is limited to the addition of a maximum 1,140 gallons of quench oil per month. Quench oil may be added and removed during uniform operation for no more than 7,700 hours per year.

## EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- \* Emission rates for chromium (hexavalent) plating tanks are based on and the facility is limited by the following maximum operating restrictions:
