

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 6469

This table lists the maximum allowable emission rates for all facilities that emit air contaminants covered by this permit.

AIR CONTAMINANTS DATA

Emission Point Groups/Numbers (1)	Source Group (2)	Air Contaminant Name (3)	Emission Rates (4)	
			lb/hr	TPY (6)
EPN-1	Truck Manufacturing Plant	VOC	358.4	281.3
		PM ₁₀	7.7	8.2
		NO _x	2.1	8.8
		CO	0.3	1.4
		SO ₂	<0.1	<0.1
		ES	78.6	69.0
FUG-1	Plant Fugitives	VOC	22.6	(5)
		ES	6.0	(5)
All Emission Points	All Sources	Single HAP		<10.00
		Combined HAPs		<25.00

- (1) Group EPN-1 is an artificial grouping of all actual emission points which exhaust through an elevated stack. Group FUG-1 is an artificial grouping of all actual emission points which do not exhaust through an elevated stack.
- (2) Artificial grouping of actual sources.
- (3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
 PM₁₀ - particulate matter (PM) equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
 NO_x - total oxides of nitrogen
 SO₂ - sulfur dioxide
 CO - carbon monoxide
 ES - exempt solvents
 HAP - hazardous air pollutant as defined in Title 40 Code of Federal Regulations Part 63, Subpart A.
- (4) Emission rates are based on and the facilities may operate on a continuous schedule of 8,760 hours per year.
- (5) Total VOC and exempt solvent emissions from all facilities authorized by this permit shall not exceed 281.3 tpy of VOC and 69.0 tpy of exempt solvents.
- (6) Except as allowed under Special Condition No. 8C, compliance with annual emission limits is based on a rolling 12-month period.

Dated September 24, 2002
