

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 2036

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) PM_{10} -
particulate matter (PM) equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
VOC - volatile organic compounds as defined in General Rule 101.1
 NO_x - total oxides of nitrogen
CO - carbon monoxide
 SO_2 - sulfur dioxide
 Cl_2 - chlorine
Al - aluminum
- (4) Fugitive emissions are an estimate only.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

Hrs/day_____Days/week_____Weeks/year_____or Hrs/year 8,760

- (a) Emission rates based on estimates as drums are changed once in two months. When the drum lids are lifted for about five minutes at the time the drums are being changed, it is estimated that higher emissions will be released.
- (b) Emission rates based on vendor information and 8,000 hours per year of operation for each blower.
