

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 3611D and PSD-TX-194M4

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

* PM allowables for PSD permit, based on front-half PM emissions only, as measured by EPA Method 5.

** PM allowables for State permit, for PM emissions as defined in TNRCC General Rules 101.1.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) TSP - total suspended particulate including PM₁₀
PM - particulate matter
PM₁₀ - particulate matter less than 10 microns
NO_x - total oxides of nitrogen
SO₂ - sulfur dioxide
- (4) Emissions from DC-4 must comply with New Source Performance Standard, Subpart F. Combined emissions from DC-2, DC-9, and DC-12 must also comply with New Source Performance Standard, Subpart F.
- (5) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
- (6) Emission rates are based on a maximum dry kiln feed rate of 275 tons per hour and 2,409,000 tons per year of raw feed with the following maximum operating schedule:

Hrs/day____Days/week____Weeks/year____or Hrs/year 8,760
