

## EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 978B

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) 1,2,4-TCB - 1,2,4 trichlorobenzene  
DICAMBA - 3,6 dichloro-o-anisic acid (and isomers)  
HCl - hydrogen chloride  
Cl<sub>2</sub> - chlorine  
NO<sub>x</sub> - oxides of nitrogen  
PM<sub>10</sub> - particulate matter (PM) equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.  
  
CO - carbon monoxide  
SO<sub>2</sub> - sulfur dioxide  
VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1  
MeOH - methanol  
CH<sub>3</sub>Cl - methyl chloride
- (4) Fugitive emissions are an estimate only.

\* Emission rates are based on and the facilities are limited to 10,000 tons of product and the following maximum operating schedule:

Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/year 8,736

All HAP emissions are based on 2002 Emission Inventory factors.

\*\* The NO<sub>x</sub> and CO emissions based on "TNRCC" (now TCEQ) Guidance Document for Flares and Vapor Oxidizers, October 2000 for non-assisted low Btu flares.

\*\*\* Emissions based on factors from AP-42 for natural gas combustion.

Loading operations are based on AP-42

Fugitive emissions are based on factors from "TNRCC" (now TCEQ) Equipment Leak Fugitives
