

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 31597

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in General Rules 101.1.
- NO_x - total oxides of nitrogen
- SO_x - total oxides of sulfur
- PM₁₀ - particulate matter less than 10 microns in diameter.
- CO - carbon monoxide
- TSP - total suspended particulate, including PM₁₀
- (4) Fugitive emissions are an estimate only.

* Emission limits are based on and the facility is limited to a maximum of 40,000 finished board feet per day and a maximum of 12,000,000 finished board feet per year
