

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 28237

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification - either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources, use an area name or fugitive source name.
- (3) VOC - volatile organic compounds as defined in 30 Texas Administrative Code Section 101.1
NO_x - total oxides of nitrogen
SO₂ - sulfur dioxide
PM - particulate matter, suspended in the atmosphere, including PM₁₀.
PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall

be assumed that no particulate matter greater than 10 microns is emitted.

- CO - carbon monoxide
- (4) Fugitive emissions are an estimate only.
 - (5) Maximum combined fill rate of 50 tons per hour for EPNs 18, 19, 20, and 21.
 - (6) Maximum combined discharge rate of 100 tons per hour for EPNs 18, 19, 20, and 21.
 - (7) maximum throughput of 25 tons per hour and 3,744 hours per year.
 - (8) maximum combined fill and discharge rate of 60 tons per hour

* Emission rates are based on and the facilities are limited by the following maximum operating schedule and operating parameters:

24 Hrs/day 7 Days/week 52 Weeks/year or 7,488 Hrs/year

** Compliance with annual emission limits is based on a rolling 12-month period.

Maximum Hourly Dryer Throughput: 180 tons

Maximum Annual Dryer and Plant Throughput: 1,347,800 tons

Scalper screen throughput limited to 180 tons per hour and 7,488 hours per year.
