

# EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. 25738/PSD-TX-840

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources use area name or fugitive source name.
- (3) NO<sub>x</sub> - nitrogen oxides  
CO - carbon monoxide  
SO<sub>2</sub> - sulfur dioxide  
VOC - volatile organic compounds as defined in General Rule 101.1  
PM - particulate matter, as determined by EPA Method 5, modified to include front and back-half particulate.  
PM<sub>10</sub> - PM less than 10 microns in diameter as determined by EPA Method 5, front-half only.
- (4) Except for VOC, long-term limits for EPN 5 based on 720 hours/year of turbine only firing with fuel oil and 8,040 hours/year combined cycle firing with natural gas. Long-term VOC limits for EPN 5 based on 8,760 hours/year of combined cycle firing with natural gas.
- (5) Long-term limits for EPN 5A based on 720 hours/year of turbine only firing with fuel oil and 8,040 hours/year of turbine only firing with natural gas.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- \*\* For a period not to exceed that authorized in Special Condition No. 15, starting from the date of the August 4, 1997 permit amendment, the NO<sub>x</sub> emission rate limitation is suspended and replaced with the limitation of Special Condition No. 15 of this permit.
- \* Emission rates are based on and the facilities are limited by the following maximum operating schedule:  
Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/year 8,760
