

Emission Sources - Maximum Allowable Emission Rates

Permit Number 85147

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification - either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources, use an area name or fugitive source name.
- (3) PM₁₀ - particulate matter equal to or less than 10 microns in diameter.
- (4) Compliance with annual emission limits is based on a rolling 12-month period with throughput limited to a combined 54,477 Tons/Year of constituent products as defined in the special conditions.
- (5) Planned startup and shutdown emissions are included. Maintenance activities are not authorized by this permit.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

24 Hrs/day, 7 Days/week and 52 Weeks/year or 8,760 Hrs/year
