Permit Number 2487

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit. (5/06)

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) NO_x total oxides of nitrogen
 - PM₁₀ particulate matter less than 10 microns
 - CO carbon monoxide
 - VOC volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
 - SO₂ sulfur dioxide

H₃PO₄ - phosphoric acid

 NH_3 - ammonia HNO_3 - nitric acid

- * Emission rates are based on and the facilities are limited by the maximum operating schedules represented in the permit renewal application of January 2004 and subsequent updates.
 - (a) Emissions from Calciners 1A and 1B are vented through one or more of the following emission points depending upon manufacturing process requirements: HPC-24, HPC-24A, HPC-26, and HPC-
 - 23. The total emissions from these sources will not exceed the quantities shown for HPC-23.
 - (b) The hourly and annual emission values for the molox bin assume to contain a maximum of 67 percent molybdenum.
 - (c) The hourly and annual emission values for the solution reactor assume to contain a maximum of 67 percent molybdenum, 50 percent nickel, and 50 percent cobalt.
 - (d) Emissions of the Main Stack (HPC 12) are a combination of emissions from the NO_x Scrubber (HPC-and the Spray Dryer (HPC-12A). The combined total NO_x emissions from HPC-12B and HPC-12C shall not exceed 15.20 lbs/hr and 47.08 tpy.
