EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Numbers 36644, PSD-TX-903M2, and N-007M1

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) NO_x total oxides of nitrogen
 - SO₂ sulfur dioxide
 - CO carbon monoxide
 - PM₁₀ particulate matter (PM) equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
 - VOC volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
 - NH₃ ammonia
 - H₂S hydrogen sulfide
 - H₂SO₄ sulfuric acid
 - SO₃ sulfur trioxide
- (4) Emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions (and representations approved pursuant to Special Condition No. 47.)
- (5) The VOC emission rates from the cooling tower are for total VOC, including benzene.
- (6) Emissions from the fire pump diesel engines are based on <u>156</u> hours per year operation. Non-emergency fire pump operations shall only occur between the hours of 8:00 a.m. and 5:00

p.m. (one engine at any one time).

- (7) These emissions are permitted under PSD or Nonattainment review in addition to State.
- (8) Turnarounds are planned for 2006 and 2007 for inspection and maintenance, and for implementation of improvements required by the TCEQ Agreed Order approved and signed March 23, 2005 (Docket No. 2003-1317-AIR-E). Thereafter, consistent with the plant's original design basis, planned turnarounds are expected at nominal intervals of once every three years for purposes such as catalyst replacement, equipment inspection, and equipment repair or replacement.
- (9) These are emission caps for the stated EPNs. Mercury shall be calculated and expressed as elemental mercury in any form or phase and shall include the mercury contained in any compound.
- (10) The Temporary Flare (EPN N-15 TEMP) shall be taken out of service no later than six months after the Elevated Flare (EPN N-15A) goes into service pursuant to Special Condition No. 14D.
- * Emission rates are based on a continuous operating schedule.
- ** Beginning January 1, 2006, compliance with annual emission limits is based on a rolling 12-month period, with the following exception: allowable emission rates and emission caps for the Ground Flare (EPN N-15) will be based upon calendar years for 2006 through 2009 and will be based on a rolling 12-month period beginning January 1, 2010.

Dated July 16, 2007
