EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit No. T-17742

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) PM_{10} particulate matter (PM) equal to or less than 10 microns in diameter. Where PM is not listed,

it shall be assumed that no particulate matter greater than 10 microns is emitted.

VOC - volatile organic compounds

NO_x - nitrogen oxide

CO - carbon monoxide

SO₂ - sulfur dioxide

NaOH - sodium hydroxide

- (4) Fugitive emissions are an estimate only.
- (5) PM₁₀ may contain chromium, nickel, aluminum, tungsten, copper, zirconium, yttria, molybdenum, titanium, iron, cobalt, and/or other compounds as reflected by the approved metal powder list.
- (6) PM_{10} may consist of aluminum, chromium, strontium, phosphate, carbon, silicon, and/or titanium.
- (7) VOC may contain cellosolve acetate, N-methylpyrrolidone, ethyl acetate, polytetrafluorethylene, and/or other compounds as reflected by the Material Safety Data Sheets for the approved paints.
 - * Emission rates are based on and the facilities are limited by the following maximum operating schedule and parameters:
