Permit Number 21878

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Air Contaminants Data

Emission Point No.	Source Name (2)	Air Contaminant Name (3)	Emission Rates	
(1)			lbs/hour	TPY (4)
PSA-FUG	Pressure Swing Adsorption Unit Fugitives (5)	со	0.95	4.20
А	Fired Gas Preheater A (9)	NOx	1.92	8.40

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.

(3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

NO_x - total oxides of nitrogen

SO₂ - sulfur dioxide

PM - total particulate matter, including PM₁₀ and PM_{2.5}, as represented

PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}, as

represented

PM_{2.5} - total particulate matter equal to or less than 2.5 microns in diameter

CO - carbon monoxide Fe (CO)₅ - iron penta-carbonyl MEA - mono-ethanolamine

(4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.

- (5) Emission rate is an estimate and is enforceable through compliance with the applicable special condition(s) and permit application representations.
- (6) Firing propane (only used during upset or routine maintenance periods).
- (7) Hourly rates are based upon maximum firing case at peak load, approximately 104 percent of base load, except for VOC and CO which are based on turndown case or 75 percent load.
- (8) Annual emissions are based on the sum of emissions for GT 1-4 at a firing rate of 2,563,000 (MMBtu) per year higher heating value.
- (9) Includes emissions during startup and shutdown.
- (10) Includes product flaring emissions during and attributable to demand reduction periods in which equipment maintenance is also conducted (e.g., product gas compressor outages)
- (11) Emissions attributable to MSS activities.
