Emission Sources - Maximum Allowable Emission Rates

Permit Number 23279

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Emission Sources - Maximum Allowable Emission Rates

- (1) Emission point identification either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources, use an area name or fugitive source name.
- (3) PM particulate matter, suspended in the atmosphere, including PM₁₀

PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.

VOC (a) - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

mainly asphalt vapors

VOC (b) - primarily diesel or kerosene vapors

VOC (c) - additional VOC due to the use of crumb rubber

NO_x - total oxides of nitrogen

 SO_2 - sulfur dioxide CO - carbon monoxide

- (4) Fugitive emissions are an estimate only.
- (5) Planned startup and shutdown emissions are included. Maintenance activities are not authorized by this permit.
- * Emission rates are based on and the facilities are limited by the following maximum operating schedule:

24_Hrs/day 7_Days/week 52_Weeks/year or 8,736_Hrs/year

** Compliance with annual emission limits is based on a rolling 12-month period.

Maximum Plant Production Rates:

Standard Hot Mix:	<u>450</u> TPH		_500,000_ TPY
Standard Hot Mix w/Rubber:	170 TPH		<u>25,000</u> TPY
Cold Mix w/ Emulsion:	<u>270</u> TPH	<u>2,000</u> TPD	<u>20,000</u> TPY
