## EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

#### Permit No. 1556

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

<sup>(1)</sup> Emission point identification - either specific equipment designation or emission point number

(2)	from plot plan. Specific point source name. For fugitive sources use area name or fugitive source name.
(3)	PM - particulate matter, suspended in the atmosphere, including PM <sub>10</sub> - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns is emitted.
(4)	<ul> <li>VOC - volatile organic compounds as defined in 30 Texas Administrative Code Section 101.1</li> <li>NO<sub>x</sub> - total oxides of nitrogen</li> <li>SO<sub>2</sub> - sulfur dioxide</li> <li>CO - carbon monoxide</li> <li>Fugitive emissions are an estimate only.</li> </ul>
*	Emission rates are based on and the facilities are limited by the following maximum operating schedule:
	24_Hrs/day7_Days/week52_Weeks/year or8,760_Hrs/year
	18 TPH and 35,000 TPY through chipper
	310 TPY FEL, see EPN 13A
	12 TPH and 35,000 TPY out of fresh chip storage
	7.5 TPH and 35,000 TPY, cooking vat
	8 TPH and 21,000 TPY, truck loading
	8_ TPH and <u>35,000</u> TPY, dryer

During operations when the dryer is on, up to 66 percent of the flue gas from Boiler Nos. 4 and 5 is redirected through the dryer and vented to EPN 11B, along with emissions from the dryer and the unloading enclosure emissions. This is the worst-case scenario because emissions are slightly higher due to the dryer operation.

3.75 TPH and <u>19,250</u> TPY, <u>5</u> boilers

Either 11A and 16A or 11B and 16B can be operated together. Only emissions from 11B and

Permit	No.	1556

16B should be counted to avoid double counting.
