Permit Number 26712

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) PM particulate matter, suspended in the atmosphere, including PM₁₀.
 - PM₁₀ particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall

be assumed that no particulate matter greater than 10 microns is emitted.

VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1.

VOC (a) - mainly asphalt vapors

VOC (b) - additional VOC due to the use of crumb rubber

VOC (c) - primarily diesel or kerosene vapors

NO_x - total oxides of nitrogen

SO₂ - sulfur dioxideCO - carbon monoxideHCl - hydrogen chloride

- (4) Fugitive emissions are an estimate only.
- (5) Speciated compounds to include hazardous air pollutants and their respective emission rates are represented in the permit application. The speciated compounds are included in the PM and/or VOC values shown on the maximum allowable emission rates table.

* Emission rates are based on and the facilities are limited by the following maximum production rates:

Standard Hot Mix: Tons/hour 500 Tons/year 800,000

Hot Mix with Crumb Rubber option: Tons/hour 400 Tons/year 50,000

Emulsified Cold Mix: Tons/hour 450 Tons/week 10,000 Tons/year 50,000
