EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Number 5848

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources use area name or fugitive source name.
- (3) VOC volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1.
 - H₂S hydrogen sulfide.
- (4) Emission rate is an estimate and compliance is demonstrated by meeting the requirements of the applicable special conditions and permit application representations.
- (5) Benzene emissions are represented as a component of total VOC emissions resulting from gasoline storage.
 - * Emission rates are based on and the facilities are limited by the following maximum operating schedule: 8,760 hrs/year.
- ** Compliance with the annual emission limits is based on a rolling 12-month period.
