## Permit Number 5572B

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

- (1) Emission point identification either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources use area name or fugitive source name.
- (3) VOC volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
  - PM particulate matter suspended in the atmosphere including PM<sub>10</sub>.
  - PM<sub>10</sub> particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no particulate matter greater than 10 microns in emitted.
  - NO<sub>x</sub> total oxides of nitrogen
  - SO<sub>2</sub> sulfur dioxide
  - CO carbon monoxide
- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.

- (5) Process vents from the A and B polypropylene production lines are controlled either 100 percent in the A/B Flare (EPN 49), 100 percent in the Flare Gas Recovery System (EPN 54), or the process vents can be split between the two control devices. The Flare Gas Recovery System is operated such that the outlet vent is routed to atmosphere if the VOC concentration is less than 10,000 ppmv and is routed back to the A/B Flare if the concentration is greater than 10,000 ppm.
- (6) Includes emissions from the Recovery System Fugitives (EPN 55) added by incorporation of Standard Permit Number 31416 without Best Available Control Technology and impacts review.
- (7) Emission rates are due to routine shutdowns/startups of the "C" Polypropylene Production Line for maintenance purposes and routine product transitions at the "C" Polypropylene Production Line.
- \* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

Hrs/day 24 Days/week 7 Weeks/year 52 or Hrs/ye	ear 8,760
--	-----------

\*\* Compliance with annual emission limits is based on a rolling 12-month period.
